1. SUMMARY

Heritage Tree Census of Manchar Nagar Panchayat was carried out during the month of August-September 2024 in 16 Wards of the city, spread over an area of 12 sq. km. Geo-coordinates of each tree were recorded using GPS instruments. The extensive field work resulted into count of 188 Heritage Trees. Total 33 tree species like Amba, Vad, Kaduneem, Umbar, Vavla, and Chinch were recorded in terms of heritage trees. For each tree, attributes like its Local name, Scientific name, GPS coordinates, Height, Age, Tree type (Native or Non-Native) and Health condition were recorded in field. Summary in tabular form is given below:

Sr. No	Component	Result and Description
1	Total number of Heritage Tress	188
2	Number of Tree species	33
3	Dominant Heritage Tree species	Kaduneem (<i>Azadirachta indica</i>) is found to be dominant Heritage Tree Species throughout the city.
4	Total Native Heritage Tree species	26
5	Total Non-Native Heritage Tree species	7
6	Maximum Heritage Trees in Ward	Ward no. 1 was recorded with highest i.e. 56 total heritage trees.

2. INTRODUCTION

The word “**Heritage**” has always been referred in context to Historical monument, culture or societal practices. But there is another kind of heritage i.e. the living heritage comprising trees in our towns and cities. These heritage trees can be found in a variety of urban spaces, such as along roads, in parks, alongside water bodies, amidst wooded groves, in religious spaces and even in private property. These heritage trees are important, of course, for their biological value, but so also for their cultural value. Heritage trees are historical artefacts, connecting urban residents to the past and providing a sense of belonging in cities that can otherwise be stressful places to live in.

What are heritage Trees?

There are a range of criteria that designate a tree as a heritage tree. These attributes, both material and non-material makes the tree stand out. The material attributes could be age or size of the tree. It could also be the result of the form or shape of the tree. Further, it could be that the tree is a rare species or a tree at risk of being lost. The non-material criteria relate to cultural and aesthetic aspects. It could be that the tree has a historical or cultural association either with a person, an event or a place. It could also be a tree associated with myth or folklore.

Under the proposed amendment by Maharashtra Government, a tree with an estimated age of 50 years or more shall be defined as a heritage tree.

It may belong to specific species, which will be notified from time to time. In addition to the age, tree’s rarity, its botanical, historical, religious, mythological and cultural importance is also considered in defining a heritage tree.

Why was the concept of heritage tree introduced?

A heritage tree will get special protection. Crucially, the tree's age will determine the number of trees to be planted as part of the compensatory plantation, that is anyone cutting a heritage tree will need to plant trees in the same numbers as the cut tree's age. According to the current Compensatory Plantation in the state, one sapling has to be planted for each tree that is cut.

In Mumbai, as per the Tree Authority set up in 1976, to help in regulating the felling of trees and providing for the planting of an adequate number of new trees through the Garden Department, the compensation ratios are 1:3. As per the amendment, the number of trees planted will be equal to the age of the heritage tree that is cut. The organization planting the compensation trees will also have to ensure the survival of the plantation for seven years and geo-tag the trees. Such plantations can be carried out either in the same plot or a common amenity plot. Through the introduction of a heritage tree, the state environment wants to discourage the cutting of heritage trees.

Why to protect Heritage Trees??

Heritage trees while valuable from an ecological perspective, are also living cultural artefacts that connect the city's past to the present. There is no better way to take civic pride in our cities than through heritage trees that are part of the history of the city itself. Heritage trees are also of value in tourism. Many nature lovers visit heritage trees in cities often taking part in tree walks, while a tourist may inadvertently visit the tree in a park taking away memories of the tree. Not just tourists, but local communities who live alongside heritage trees also attach cultural value to trees, along with aesthetic or ecological values such as shade. Heritage trees can play an important role in creating awareness about the importance of both heritage trees, as well as other trees in an urban landscape. Many of the heritage trees especially the Ficus are keystone species in the environment. The old trees serve as important roosting, nesting sites or as a food source for many species of wildlife. An ancient tree is also an invaluable gene bank of a tree species.

3. METHODOLOGY

The purpose of the project was to create a detailed inventory of Heritage Tree individuals and species known as the “Census”. In total, 15 sq. kms of the project area was surveyed and each tree was counted and was get tagged on a GPS device. The data collection was done from all the 16 wards separately in the Manchar City. Trees having woody stem and having minimum girth of 10 cm in diameter at the chest level of an average height person and height of about 3 m high were counted. Trees which fit in these criteria were counted. Data was collected from all wards using GPS etrex 30 instruments. Information like Scientific Name, Common name, Diameter, Height, Health condition, GPS location, ownership was recorded in field itself.

This data was fed into Microsoft Excel software. During the field work, the team noted down location, ownership, counted each individual tree, measured the diameter, noted down the approximate height and age of the same. The condition of the tree whether in healthy condition, infected condition, dead or mechanically cut – were mentioned. Trees growing on the roadside, in the government plots, agricultural boundaries and in the private plots were included in the census. Most of the tree identification was done in field. In case of unidentified trees, specimens were collected and identified with help of literature and with the help of plant taxonomist. Data from all the instruments was collected and analysed using MS excel. Technology used GPS device along with the Google earth pro software was used to mark GPS positioning of each tree individuals.

4. OBSERVATION

Table 4.1: Tree Census was done in all 16 wards within the city limits. Count of all Heritage tree of all 16 wards are represented in following tables

Sr. No	Ward No	No. of Heritage Trees
1	Ward 1	56
2	Ward 2	12
3	Ward 3	12
4	Ward 4	5
5	Ward 5	6
6	Ward 6	8
7	Ward 7	1
8	Ward 8	4
9	Ward 9	6
10	Ward 10	21
11	Ward 11	20
12	Ward 12	12
13	Ward 13	3
14	Ward 14	9
15	Ward 15	13
16	Ward 16	0
	Total	188

Table 4.2: Tree Census was done in all 16 wards within the city limits. Count of each tree species of all the 16 wards are represented in following tables:

Sr. No	Species	Scientific name	Count
1	Amba	<i>Mangifera indica</i>	7
2	Bakul	<i>Mimusops Elengi</i>	4
3	Bhendi	<i>Thespesia Populnea</i>	2
4	Bor	<i>Ziziphus mauritiana</i>	2
5	Buch	<i>Millingtonia Hortensis</i>	2
6	Buffalo Thorn	<i>Ziziphus Mucronata</i>	1
7	Chinch	<i>Tamarindus indica</i>	22
8	Devababhal	<i>Vachellia Nilotica Subsp. Tomentosa</i>	1
9	Dhoop	<i>Parishia Insignis</i>	1
10	False Ashoka	<i>Monoon Longifolium</i>	1
11	Gavran babbhal	<i>Vachellia nilotica</i>	2
12	Gulmohar	<i>Delonix regia</i>	3
13	Jambhal	<i>Syzygium Cumini</i>	2
14	Jambphal	<i>Syzygium Jambos</i>	4
15	Kaduneem	<i>Azadirachta indica</i>	40
16	Karanj	<i>Pongamia Pinnata</i>	8
17	Katesavar	<i>Bombax Ceiba</i>	1
18	Kavath	<i>Limonia Acidissima</i>	2
19	Mohagani	<i>Swietenia Macrophylla</i>	1

Heritage Tree Census of Manchar Nagar Panchayat 2024-25

20	Naral	<i>Cocos Nucifera</i>	3
21	Pimpal	<i>Ficus religiosa</i>	26

5. RESULT ANALYSIS OF HERITAGE TREES

- Ward no. 1 has the highest number of heritage trees, with 30% coverage.
- Followed by Ward no. 10 and Ward no. 11.
- The majority of the heritage trees are native species.
- A significant count of the heritage trees was found near religious sites and agricultural fields, said they were planted by past generations.

Fig 5.1 – Ward wise amount of Heritage Trees.

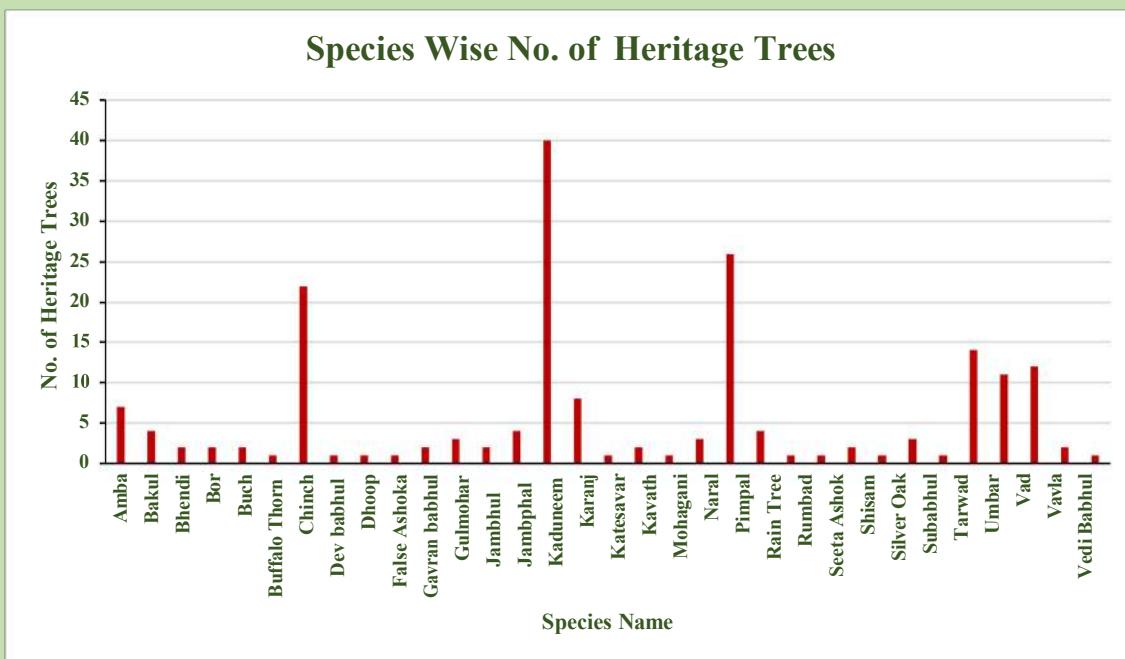

Fig 5.2 - Species wise amount of Heritage Trees.

- ❖ Among all the 33 Heritage tree species, Kaduneem (*Azadirachta indica*) was found to be most dominant species with a total count of 40 trees, followed by Pimpal (*Ficus religiosa*) with a count of 26 and later followed by Chinch (*Tamarindus indica*) with a count of 22 trees.
- ❖ These three dominant species, along with all the other heritage trees, hold significant ecological, cultural, economic, and medicinal value for the community.

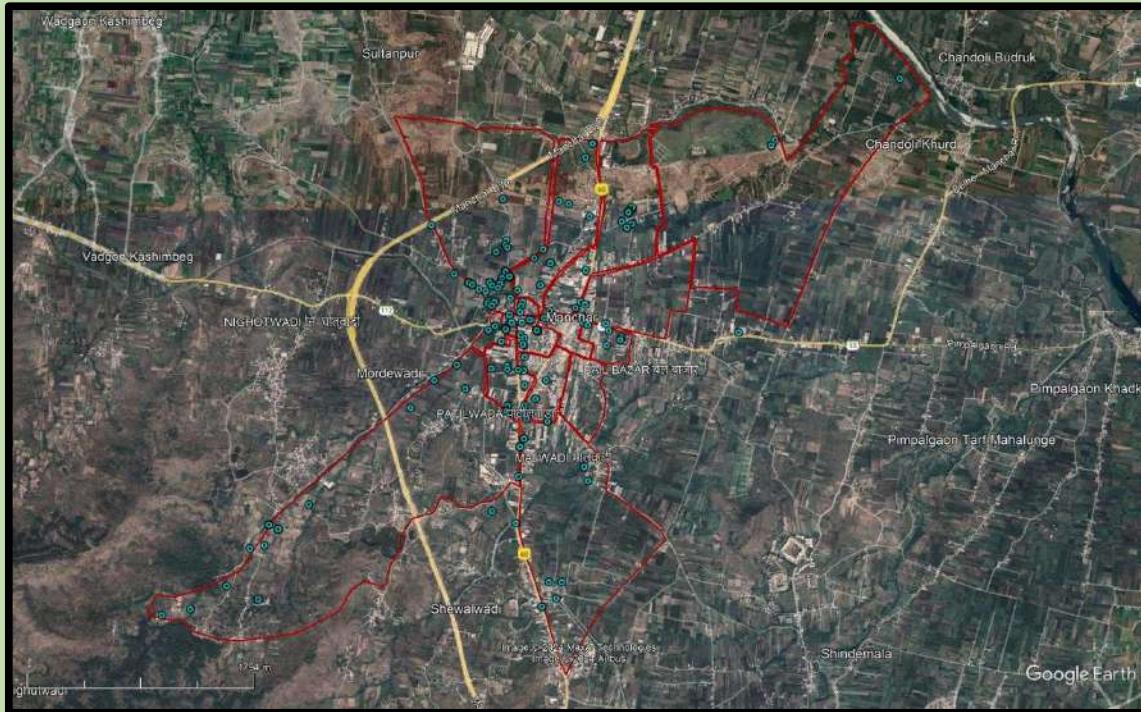

Fig 5.3 – Location wise heritage Trees marked in blue icon.

- a) Most of the heritage trees are situated in centric part of the city, mainly represented by religious places like Mandir and Dargah.
- b) Few trees located on outer parts are the one seen in agricultural fields or nearby villages.
- c) Few wards are large in size but were found to have no or less heritage trees as compared to their size. As asked to locals, many old trees were been cleared due to agricultural expansion or some other developmental projects.
- d) Presence of heritage trees near Mandir and Dargah are symbol of people's faith and connection with their nature since ages. Maintaining this faith will surely lead to conservation of existing trees. And many new trees will get added very year.

6. RECOMMENDATION

1. City has good population of healthy trees, but special attention should be given to heritage trees as they are old and are prone to diseases.
2. More focus needs to be given on Indigenous species, especially plantations done in and near Government owned property like Government buildings, road side space, river side space, play grounds and gardens.
3. Removal and clearing non-indigenous patches; plantation of indigenous fruiting and flowering species to support local birds and other faunal species.
4. Ensuring high success rate by proper protection of newly planted saplings till they grow.
5. Involvement of locals by conducting various programs under “Majhi Vasundhara Abhiyan” to sensitize people regarding Heritage Trees and its protection.
6. Community participation program to create awareness among locals.
7. Involvement of schools and colleges through Tree adoption program.
